

## Preliminary development of treatment for HPV vaccine injured girls

By Stig Gerdes, MD

Dear reader,

Here is a preliminary statement of my diagnosis and treatment of 13 very, very sick women, of whom 11 are HPV vaccine injured and 2 are affected by ME (myalgic encephalomyelitis).

As seen, the treatment has an effect and I have no doubt that it is curative in some cases, as evidenced by these reports. Whether the treatment can help 100% is questionable, but American studies and experience shows that ME patients can be helped in 85% of cases. ME is a syndrome that is triggered by bacteria, viruses, molds, heavy metals, vaccines, artificial DNA, and allergens. HPV vaccine injured is a subgroup of ME.

The treatment has in some patients not been administered long enough that a definitive conclusion can be drawn. Treatment needs to be administered 4-6 months to show conclusive results. However I think that the results shown to date should be taken seriously by the Danish health Authorities, so that the minister of health again requires The Regions to diagnose and treat this major group of severely ill HPV vaccine damaged youngsters.

The experience I have gained and all the nice people who have been assisting me to get to here, are of course available to help in this difficult process for our healthcare system.

The only way I can diagnose HPV vaccine injured is by the number of symptoms occurring in relation to the time of vaccination. I also use the symptom tables, showing which and how many symptoms each patient has. To get a quick overview of the patient's symptoms, I use "The VAS Scale" from 0-10, where 0 is none and 10 is the maximum of the symptoms. "Maximum score" indicates the maximum point, the patient scores, if all symptoms have strength 10. Thereby, you can always see how many symptoms a patient have, by dividing the maximum score with 10.

"Current score" is the sum of the current points at any given time.

It is very, very important to emphasize that all patients have been sent around in the Danish Healthcare system, usually several times to the same department without anyone being able to make a diagnosis, or give them a dignified treatment.

Yours Sincerely,

Stig Gerdes

General practitioner

## Patient no. 1

The patient age 38, has given birth to three children. The last child was born in February 2013, the patient had her first HPV vaccination in March 2013 and the second in June 2013. She received various pronounced symptoms around May 1<sup>st</sup> 2013 and subsequently she was hospitalized several times. She was very ill and was not able to do anything. The spouse had to take care of the children and their home. She developed a total of 31 different symptoms. Max. score 310 real score 260 before treatment with intravenous Vitamin C. January 8<sup>th</sup> 2014 the patient started on intravenous Vitamin C with Glutathione 1-2 times a week, and she responded to this. Thus, dropped her real score after 6 weeks to 180 and after another 5 weeks to below 50. She was treated with intravenous vitamin C the last time in late January 2015 and continued a little longer with IV Glutathione, which she completed February 27<sup>th</sup> 2015, when her real score was 0. Only sequelae of HPV vaccine damage is skin striae. She continues with oral intake of various vitamins and minerals, as well as keeping her diet.

The patient has not weighted her symptoms individually, but has assessed the total actual score, which can be seen in the tables below.

Symptoms			
1	Heavy menstruation	14	Difficulty breathing
2	Constant nausea	15	Trembling and unsteadiness
3	Loss of appetite	16	Pain in the soles of the feet
4	Fluctuating pulse	17	Headache
5	Pain in the body	18	Visual disturbances
6	Pain in the joints	19	Tightness in the ears
7	Pain in the legs	20	Tinnitus
8	Burning pain in the body	21	Reduced B3, D and Calcium
9	Constant heartburn	22	Itching
10	Abdominal pains	23	Short of breath at light exercise
11	Dizziness	24	Memory problems
12	Rapid heart rate	25	Difficulty concentrating
13	Abnormal fatigue	26	Joints / wrinkles

## Patient no. 2

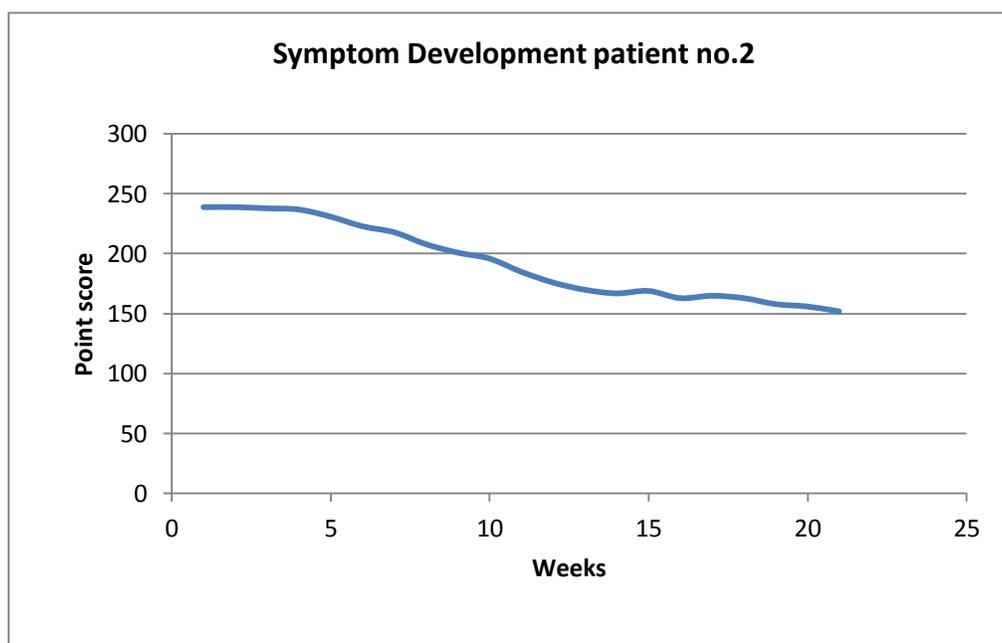

The patient is 16 years old and was vaccinated with the HPV vaccine in November 2012. In February the patient went home from school with severe headache, and after that she developed serious adverse events. A total of 24 symptoms, especially rapid heart rate, leg pain, severe headache, and all symptoms were maximum, so that the patient's actual score before treatment was 239 out of a max. Score of 240. The treatment started October 26<sup>th</sup> 2014 with intravenous Vitamin C + salts, vitamins and special diet.

The patient was treated with 25 g of Vitamin C per week for the first 11 weeks and then 25 g 2 times a week. The patient was a long time to notice any improvement, but then it went forward. At one time around her birthday, she had neglected diet, and was very ill with severe headache, abdominal pain and vomiting.

The patient has weighted her symptoms individually and assessed them every week.

The current score is 152 after 21 weeks of treatment.

Symptoms			
1	Blurred vision	13	Cannot move legs
2	Loss of appetite	14	Trembling and unsteadiness
3	Hoarse and husky voice	15	Swollen eyes
4	Pain in the body	16	Cold feet
5	Pain in joints	17	Headache
6	Pain in the legs	18	Bad breath
7	Cold glow	19	Nausea
8	Pale skin	20	Increased thirst
9	Dry skin	21	Unexplained weight loss
10	Dizziness	22	Chest tightness
11	Rapid heart rate	23	Difficulty moving
12	Abnormal fatigue	24	Difficulty concentrating

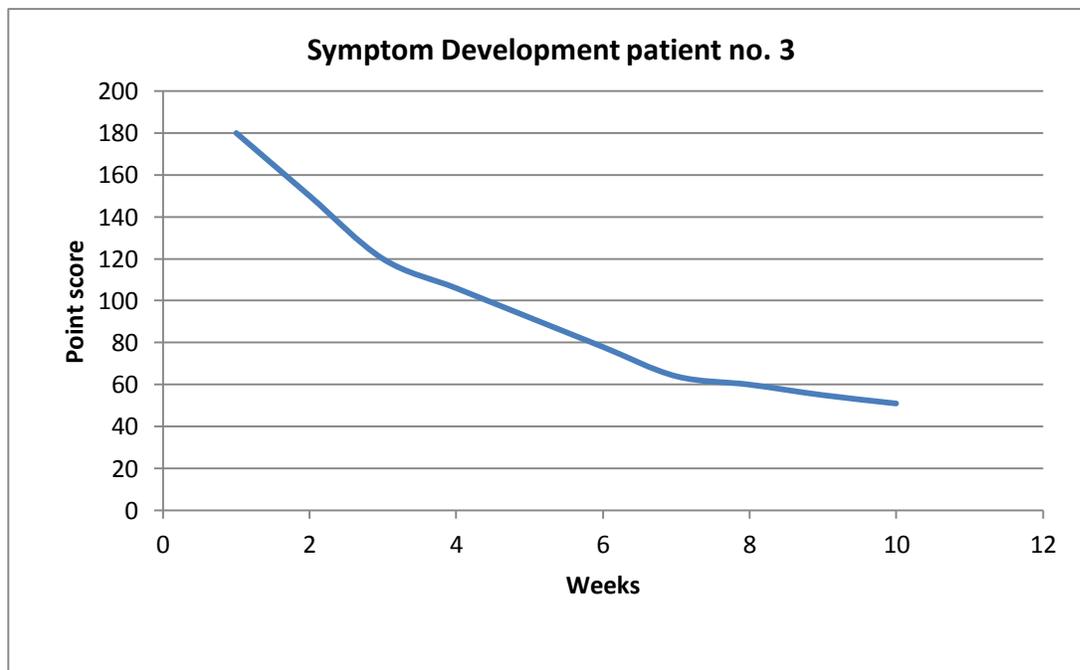

### Patient no. 3

This 36 year old mother has ME (myalgic encephalopathy), probably triggered by infection/molds. The debut was in the autumn of 2012 and gradually over the next year her symptoms developed very violently with recurrent fever, she lost the ability to pee so it was necessary to catheterize her. Violent abdominal pain with vomiting and severe weight loss of 10 kg. Various examinations could not give any explanation, and she was therefore given a mental diagnosis BDS (bodily distress syndrome), but the psychiatrist refused this diagnosis. In December 2013 she developed additional symptoms and gained 20 kg weight in two months

Her max. score was 220 and the real score before treatment with intravenous Vitamin C was 180. She began on treatment with intravenous Vitamin C November 16<sup>th</sup>2014. She started up gently with intravenous Vitamin C once a week and it ended up that she got 50 g 2 times weekly with Glutathione. After 22 weeks she does not use the catheter any more, has no fever attacks and has a current score of 50.

She continues with intravenous treatment with Vitamin C and Glutathione.

Symptoms			
1	Use of catheter	12	Lack of regeneration of muscles
2	Tics in the arms, legs and head	13	Fatigue by activity
3	Involuntary muscle movements	14	Chills
4	Sensory disturbances	15	Mouth ulcers
5	Cramps	16	Swelling of the face
6	Dizziness	17	Bruising
7	Cognitive difficulties	18	Diarrhoea
8	Reduced force alternately in the body	19	High and low blood pressure
9	Lack of menstruation	20	Palpitations
10	Rash	21	Sleep problems
11	Flu symptoms	22	Muscle aches

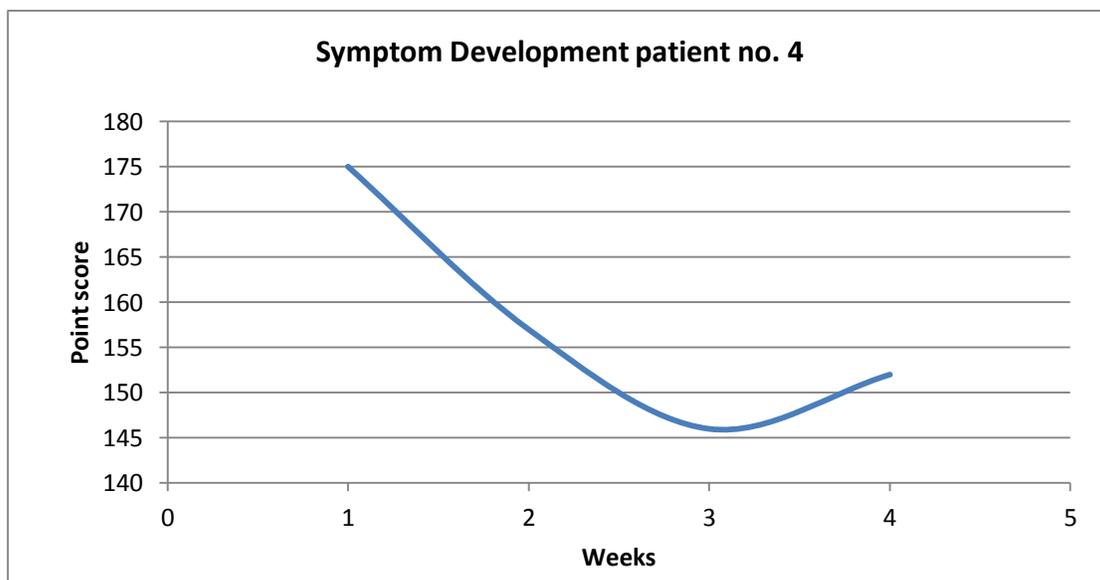

## Patient no. 4

New patient due to HPV vaccine injuries. The patient now weighs 42kg (92lb) and is 174 cm high, giving a BMI of 13.9. The mother was also very slim at that age. Until the patient received the HPV vaccine in 2008, she was a normal, well-functioning, happy and energetic young girl, but after the HPV vaccine, she became increasingly sensitive and with decreasing energy level. The patient have insomnia, pigmentation on stomach and back - hives ?, she developed migraine, visual disturbances, menstrual difficulties, severe anemia, solar dermatitis, constantly feeling cold, icy hands and feet with blue discoloration of the nails – diagnosed with Raynaud's syndrome. Furthermore, the patient have abdominal pain, swollen lymph nodes, weight loss of 12kg. The patient has an absence of 16% in high school and have not gone in high school since October 2014. The patient has been examined by various specialists, but no one can make a diagnosis, and will not listen to her. They believe that the patient has an eating disorder, anorexia and mental problems!

Before the patient started on intravenous Vitamin C + vitamins and various supplements and a diet the patient's max. score is 340 and the actual score is 175 before treatment and down to 146 after 3 treatments.

Symptoms			
1	Headache	18	Sound sensitivity
2	Sore entire body	19	Sensory disturbances
3	Mood swings	20	Tics in the eyes
4	Fatigue	21	Heavy legs
5	Difficulty concentrating	22	Force reduction in arms
6	Tremors	23	Acne
7	Dizziness	24	Right / left shoulder pain
8	Sore eyes	25	Tinnitus/plugs in her ears
9	Memory impairment	26	Hair loss
10	Sore feet	27	Cramps in legs
11	Sore hip	28	Temperature fluctuations
12	Difficulty walking	29	Body / lower back pain
13	Sore neck	30	Palpitations
14	Tingling in legs	31	Insomnia
15	Nausea	32	Abdominal pains
16	Sensitive to light	33	High pulse
17	Visual disturbances	34	Low blood pressure

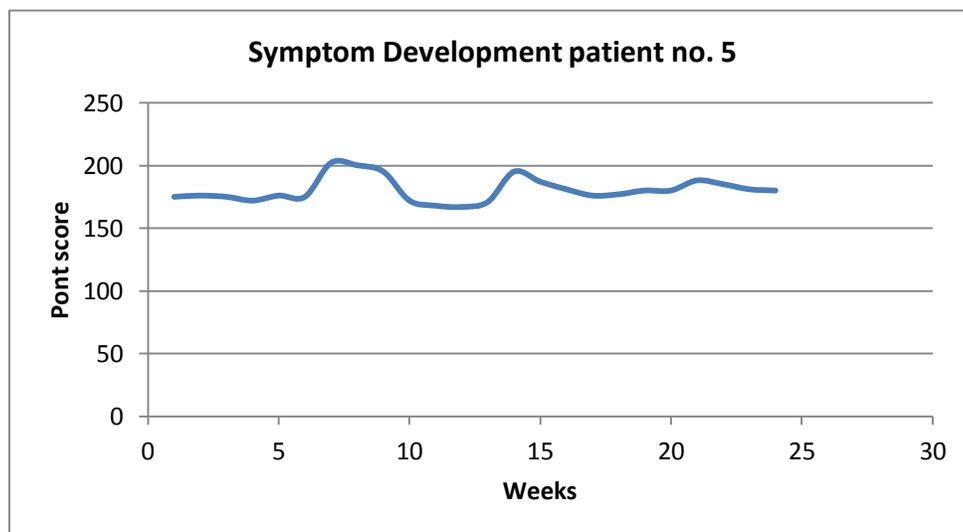

## Patient no. 5

A 22 year old woman who at 15 years of age was healthy, cultured football at the elite level at the national team. HPV vaccinated December 12<sup>th</sup> 2008, February 13<sup>th</sup> 2009 and June 1<sup>st</sup> 2009. She was a little sick after the first vaccination, but after the second vaccination, she suffers from flu symptoms with body pain, abnormal fatigue, dizziness, swollen lymph nodes and tonsils, recurrent infection and is constantly sick. She gets her 3<sup>rd</sup> vaccination and then it goes all wrong. Her symptoms are chronic headache/migraine, severe tiredness, dizziness, nausea, insomnia, restless, pain in the shoulders, etc.

October 11<sup>th</sup> 2014 she starts intravenous Vitamin C one time per week, increasing to 25 g and then increasing to 50 g, and then 2 times a week. Furthermore, she gets vitamins and salts plus diet.

The patient's max. score is 270 and the real score is 175, before she starts the intravenous treatment. After 24 treatments, the real score 180. Why is she not responding? Is it Glutathione she is missing? And EDTA?

Symptoms			
1	Headaches / migraines daily	15	Fluctuating body temperature – warm
2	Fatigue - daily needs	16	Acne on the upper body / face
3	Dizziness	17	Insomnia
4	Nausea	18	Menstrual pain / discomfort
5	Frequent urination night + day	19	Blister / mouth ulcers
6	Rapid pulse - discomfort	20	Concentration / memory problems
7	Pain in the neck and shoulder	21	Pain in jaw / tooth problems
8	Pain in the hip, knee and lower back	22	Swollen lymph / sore throat
9	Abdominal pains	23	Sound and light sensitivity
10	Chest pain	24	Diarrhea
11	Swelling face / eyes	25	Cold sores
12	Swelling in calves	26	Blisters on the eyes / vision problems
13	Cold feet	27	Bacteria / virus / flu symptoms
14	Restless legs		

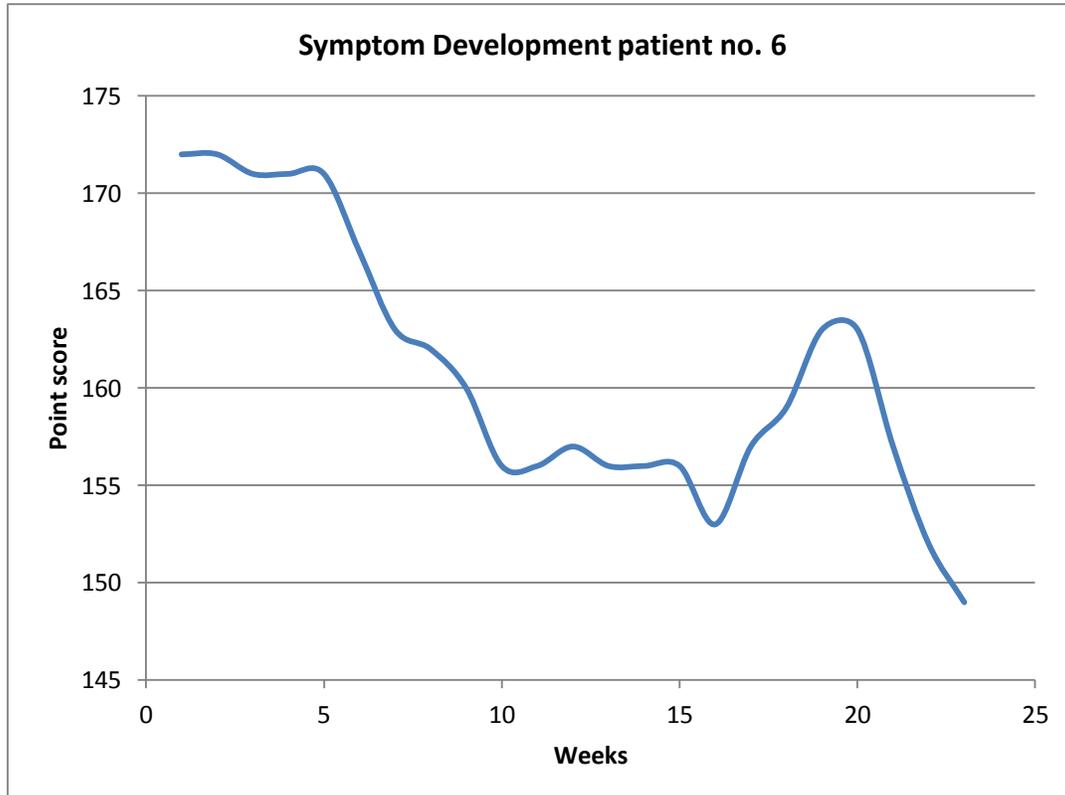

## Patient no. 6

21-year-old woman who has been very sporty, very skilled dancer until she got the HPV vaccine in 2009. She developed headaches, significant fatigue, muscle tension and pain throughout the body, involuntary jerking of the arms and legs, sleep needs at 19 hours a day, dizziness, low blood pressure, recurrent infections, impaired memory, confused, restless and weight loss. She is diagnosed with an immune deficiency, POTS and left sided brain damage. She is not able to tend high school anymore.

October 11<sup>th</sup> 2014 the patient began treatment with intravenous Vitamin C. Max. score 180, real score before treatment 172. She continues with the diet she has been on for years. She is treated initially with Vitamin C 12,5 g once a week and it is gradually increased to 25 g twice a week. After 22 weeks, her real score is 148, a decrease of 24 points, corresponding to an improvement of 14%.

Symptoms			
1	Headache	10	Acne
2	Sore entire body	11	Højre-/venstre skuldersmerter
3	Fatigue	12	Hair loss
4	Difficulty concentrating	13	Cramps in legs
5	Dizziness	14	Body / lower back pain
6	Memory impairment	15	Palpitations
7	Sore neck	16	Insomnia
8	Light sensitivity	17	High pulse
9	Sound sensitivity	18	Low blood pressure

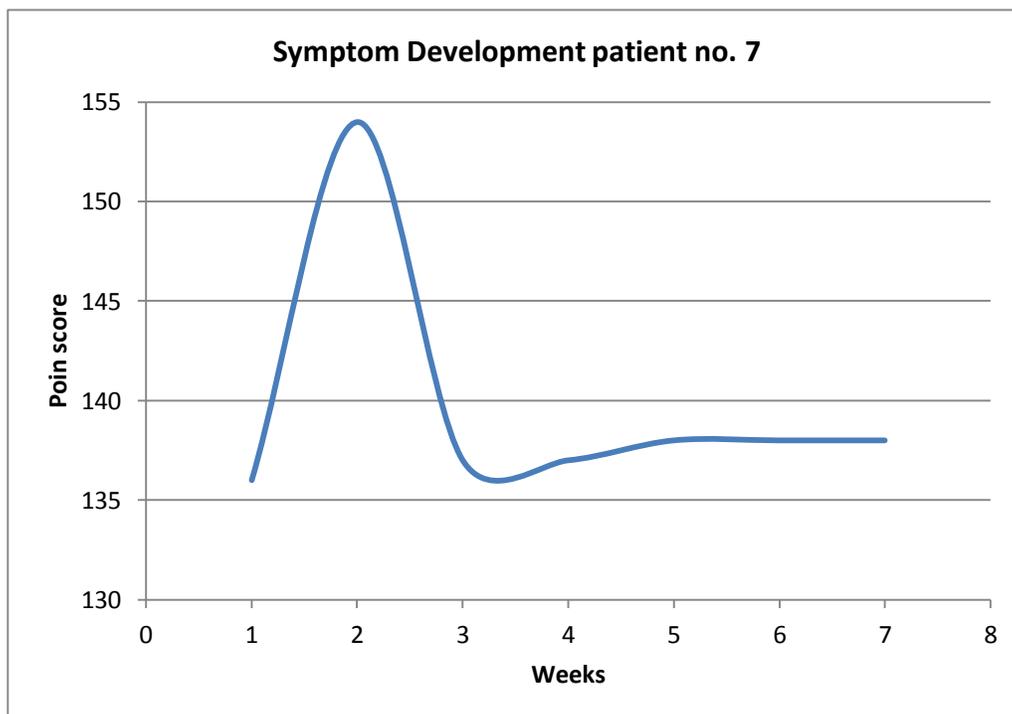

## Patient no. 7

A 34 year old mother who has always been healthy. 1<sup>st</sup> HPV vaccination takes place in January 2013 without complications. 2<sup>nd</sup> HPV vaccination in March 2013, then her nightmare begins. She has pain and sensory disturbances in the extremities, low blood pressure/pulse, been diagnosed with POTS, nausea, exhaustion, weight loss of 10 kg (22 lb), been on sick leave since July 1<sup>st</sup> 2013, and have been by her general practitioner plenty of times and sent around to specialist departments countless times. She has always been aware that the HPV vaccine causes her discomfort, but has been flatly rejected by all specialists.

January 31<sup>st</sup> 2015 she starts treatment with intravenous Vitamin C. The 1<sup>st</sup> treatments are carried out by the undersigned, the rest is remote treatment. The treatments starts with Vitamin C 25 g intravenously.

Max. score is 180 real score is 136 before treatment, after 5 treatments her real score is 138 points. The patient should also be treated with Glutathione in the near future.

Symptoms			
1	Temperature up/down	10	Reduced force of arms
2	Sensory disturbances	11	Pain in right arm
3	Fatigue	12	Pain in hands
4	Difficulty concentrating	13	Nausea
5	Dizziness	14	Palpitations/high pulse
6	Memory	15	Insomnia
7	Sore ankle bilateral	16	Low blood pressure
8	Sensitivity to light	17	Visual disturbances
9	Pain in the feet	18	Headache

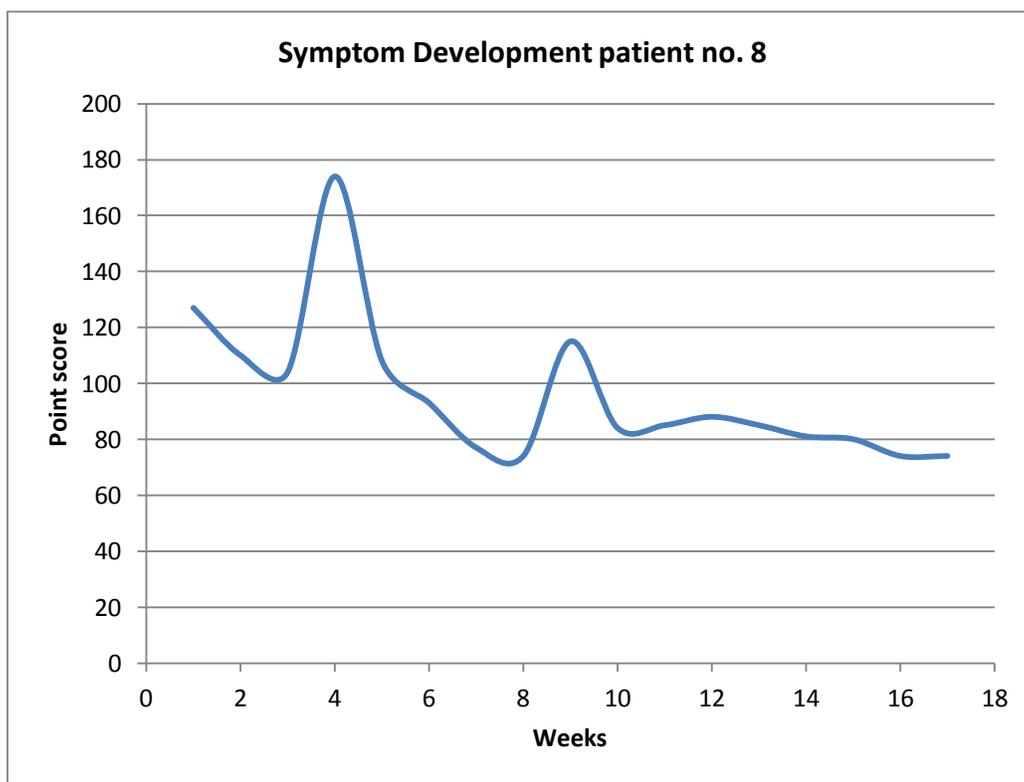

## Patient no. 8

A 26 year old woman who has always been healthy. Got her HPV vaccination in January, February and June 2013 and already after the 1<sup>st</sup> vaccination she gets symptoms. These deteriorate after the 3<sup>rd</sup> vaccination with fatigue, dizziness, headaches, migraines, back pain and abdominal infections. In July she is diagnosed with mononucleosis, and then she develop strong symptoms with dizziness, fatigue, very weak, sensitive to light, sound, smell, taste and touch, palpitations, EEG abnormalities, recurrent syncope and so on. The patient is virtually bedridden in the period June 28<sup>th</sup> 2013 and need help to ordinary necessities, like cleaning and driving.

She has got cell changes before the HPV vaccination. There is a worsening of her cell changes that leads to a conic in December 2013. It takes her a month to recover from surgery.

Her max. score is 230 and the real score is 127 before she start intravenous Vitamin C therapy November 9<sup>th</sup> 2014, she starts with 25 g each week and slowly increased to 37,5 g and then 25 g 2 times a week. Sometimes supplemented with Glutathione 200-500 mg and increasing to 1000 mg every week. After 17 weeks of treatment, her real score is 74.

Symptoms			
1	Headache	13	Reduced force of arms
2	Sore entire body	14	Acne
3	Fatigue	15	Hair loss
4	Difficulty concentrating	16	Temperature fluctuations
5	Tremors	17	Pain in the back/lumbar
6	Dizziness	18	Palpitations / pain
7	Sore hip	19	Insomnia
8	Difficulty walking	20	(Near) fainting
9	Sore neck	21	Light in the whole body
10	Light sensitivity	22	Swelling of the face / mouth
11	Sound sensitivity	23	Disturbances in the face
12	Speech disorder	24	

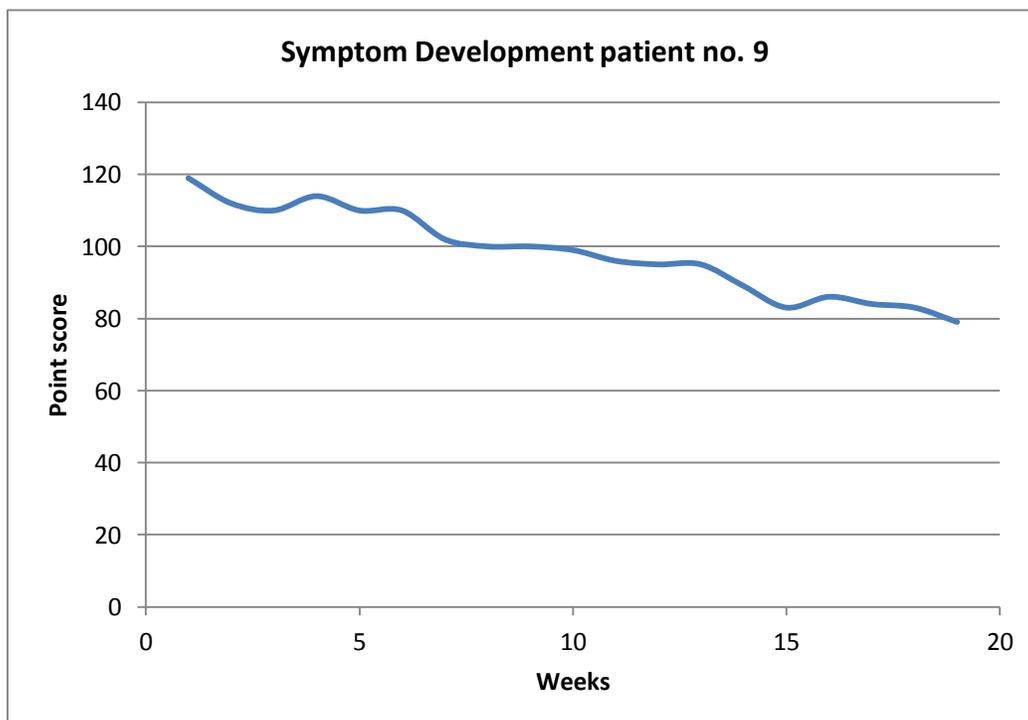

## Patient no. 9

A 31 year old woman who has always been healthy and active until in 2004 where she was 1<sup>st</sup> given Hepatitis- and tetanus vaccination. It gave her some problems with the shoulders and the entire musculoskeletal system; it looked like almost a whiplash. In 2012 she got the HPV vaccination and after the 1<sup>st</sup> vaccination, she was unspeakably tired. After the 2<sup>nd</sup> vaccination she fainted three times and developed various symptoms, bruises throughout the body, fatigue, cough similar to asthma, trouble remembering and concentrating - she was seen by a neuropsychologist, nausea and vomiting, sometimes vomiting without prior nausea, pain in extremity, hair loss, acne. She has been sick for 10 years. She is being helped in flex-job, can handle three hours work a week, stays in bed 16 hours a day and she cannot manage her own household or take care of her children.

November 9<sup>th</sup> 2014 she started on intravenous Vitamin C + vitamins and salts, as well as diet. Her max. score is 150 and the real score is 119, before she starts intravenous treatment. After 19 treatments her real score is 79, an improvement of 33.6%. Intravenous treatment starts with Vitamin C 25 g once a week and gradually increase to 50 g twice a week, supplemented with glutathione and EDTA.

Symptoms			
1	Asthma / breathing problems	9	Difficulty concentrating
2	Dizziness	10	Tired legs
3	Nausea	11	Hair loss
4	Fainting/close, looks black	12	Acne
5	Sore neck	13	Eczema
6	Sore shoulders	14	Fatigue
7	Sore left hip	15	Sore left arm and shoulder
8	Memory problems		

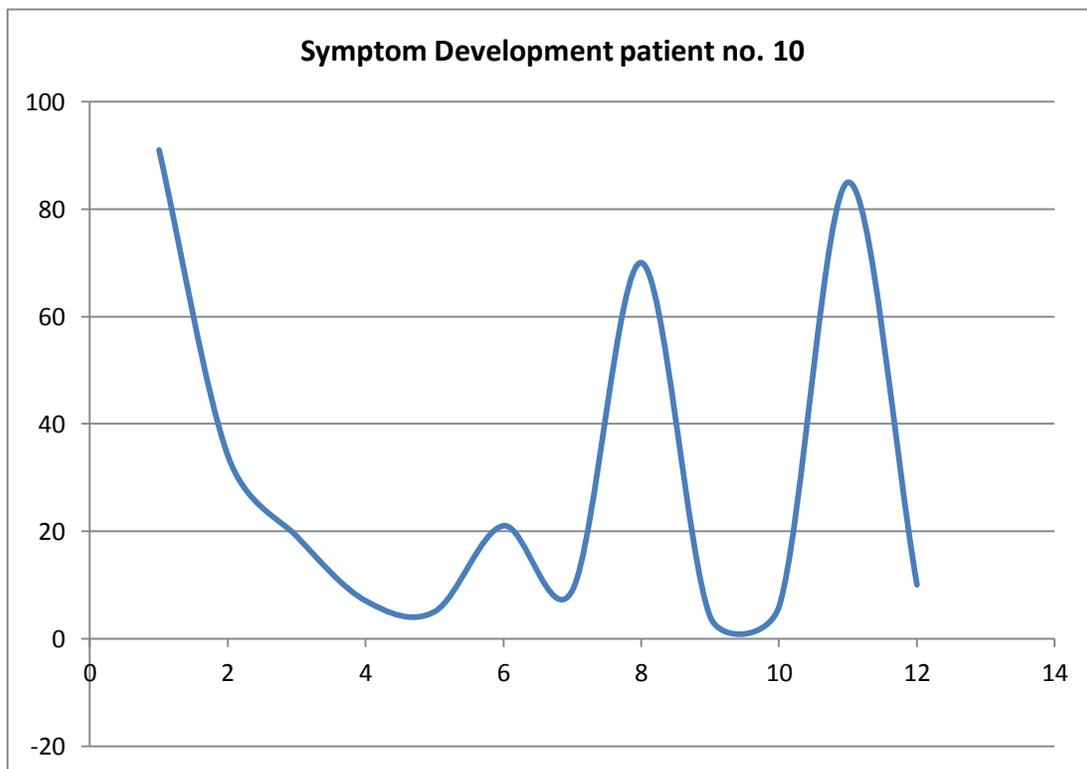

## Patient no. 10

A 22 year old woman was vaccinated the HPV vaccine in December 2009 and has been ill since become. She fell with dizziness, headache, visual disturbances, paralyzed from the belly button and down, was rushed to the hospital - no diagnosis. Many subsequent infections, sore sleeping legs and fatigue. In 2012 she received sensory disturbances from the belly button and down and in 2013 she was diagnosed with transverse myelitis.

Before treatment her max. score was 150 and real score 91. She started up with intravenous Vitamin C on February 11<sup>th</sup> 2014 with 25 g once a week, then 37,5 g and ended with 50 g on January 10<sup>th</sup>, where she stopped intravenous treatment, because she was all right. Subsequently, she has started as a student nurse and has had a tough start. She starts having fatigue, insomnia, and sometimes having pain and numbness in the legs. She resumed, therefore, intravenous Vitamin C.

Symptoms			
1	Headache	9	Memory problems
2	Sore entire body	10	Tingling in arms / legs
3	Mood swings	11	Nausea
4	Fatigue	12	Sensitivity
5	Difficulty concentrating	13	Sound sensitivity
6	Tremors	14	Infections
7	Dizziness	15	Toothache
8	Sore eyes		

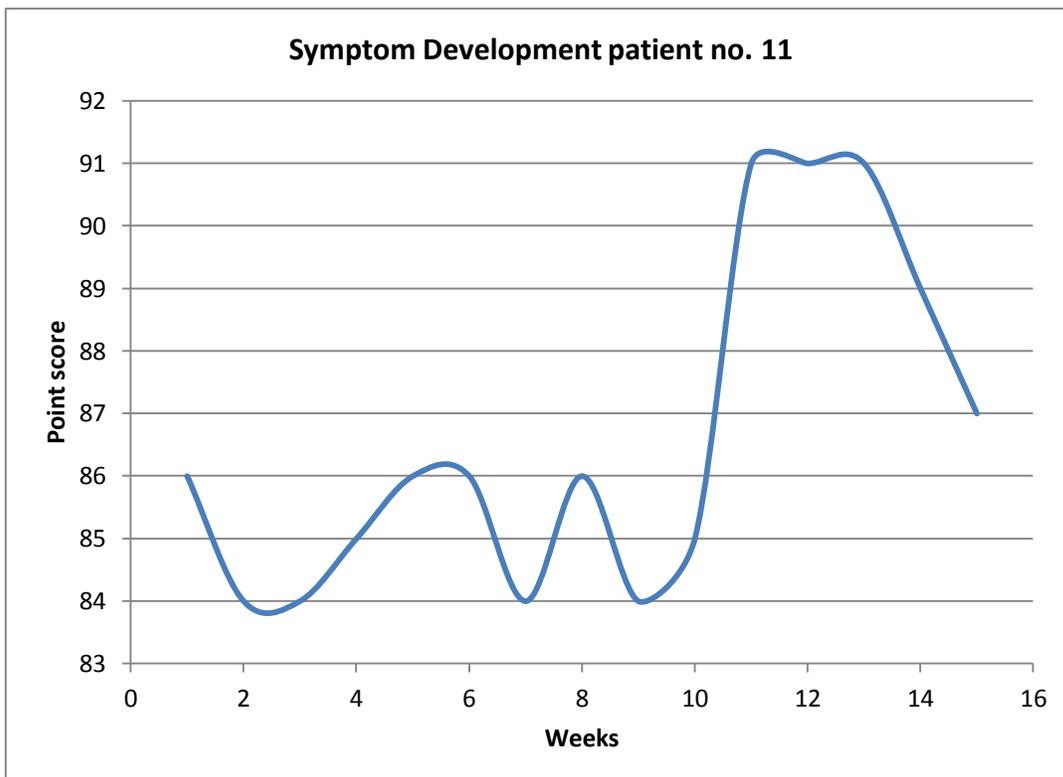

## Patient no. 11

A 16 year old woman who has always been healthy until October 2011, where she got the 3<sup>rd</sup> HPV vaccine. She had severe headache, audio- and photosensitivity, fatigue, decreased activity, decreased mood, difficulty in school.

November 16<sup>th</sup> 2014, the patient began intravenous Vitamin C + various vitamin supplements and a diet plan. She was given intravenously Vitamin C once a week, 1<sup>st</sup> time, 25 g, which was too much. The next 3 times 12,5 g and then 25 g per week. Her max. Score is 140, real score is 86 before treatment. The treatment are moving the symptoms around in her body, but the real score is 87 after 15 weeks of treatment. She will probably have effect of Glutathione.

Symptoms			
1	Headache	8	Hair loss
2	Dizziness	9	Insomnia
3	Nausea	10	Mood swings
4	Sore neck	11	Tingling in the hands
5	Sore shoulders	12	Memory impairment
6	Sensory disturbances	13	Difficulty concentrating
7	Acne	14	Sensitivity

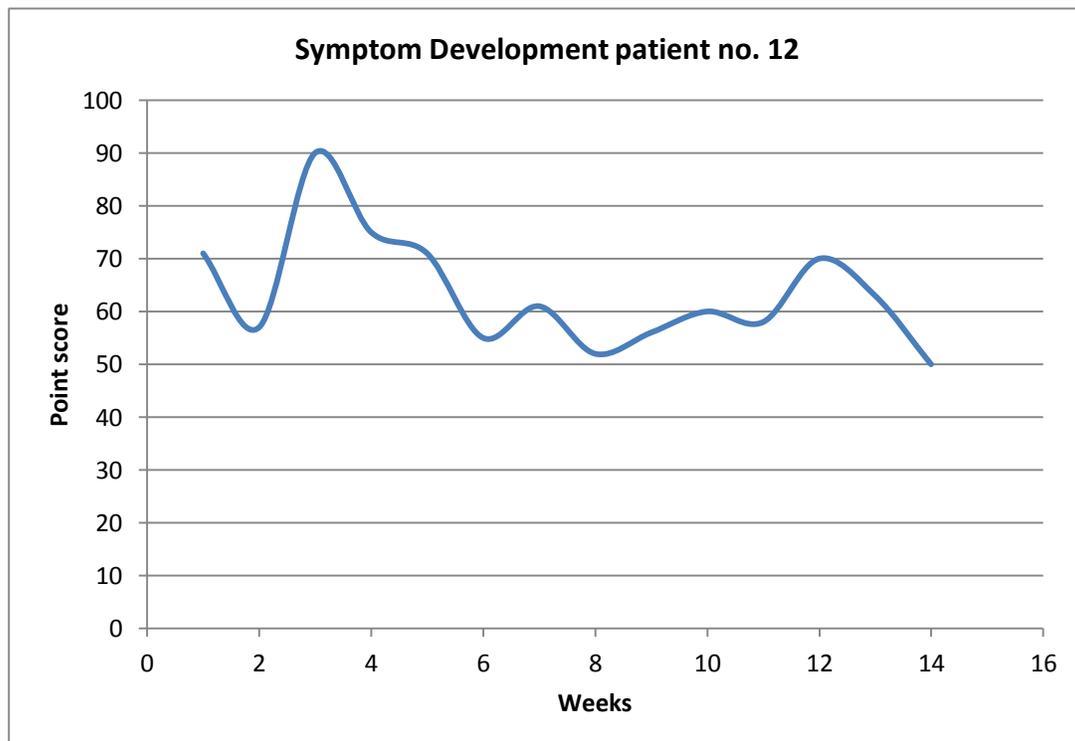

## Patient no. 12

A 14-year-old girl who got the HPV vaccine. The patient received the 1<sup>st</sup> HPV vaccine on May 31<sup>st</sup> 2012, which destroyed her immune system. 2<sup>nd</sup> vaccine elicited the same symptoms, and after the 3<sup>rd</sup> vaccine in the fall of 2013 everything went badly wrong. Rampant local swelling at the injection site, flu symptoms for 3 weeks, was very ill throughout the fall and fainted a few times and nearly fainted several times. The patient could not complete school, she felt worse with multiple symptoms and were referred to the Department of Pediatrics and Adolescent Psychiatric ward. Which could not provide any diagnosis. The patient could not cope with school, she began intravenous Vitamin C + various vitamins and diet to the extent that she could handle it. On November 24<sup>th</sup> 2014 the patient max. score before treatment is 150, and the real score is 71. The patient received intravenous Vitamin C 12,5 g 2 times weekly for 5 weeks and then 2 weekly treatments with 25g, and periodically 10 ml Glutathione 1 time a week. The patient's actual score is 50 after 14 weeks of treatment.

The patient is suffering of anxiety, which obscures the picture. It has been necessary for the mother to leave her job, so that the family could get peace and the patient is relieved of schooling and education.

Symptoms			
1	Nausea	9	Cold feet
2	Discomfort / uncomfortable	10	Unrest/body ache
3	Rapid pulse	11	Sore throat
4	Dizziness	12	Insomnia
5	Fatigue	13	Sound sensitive
6	Main / earache	14	Flu symptoms
7	Bad stomach	15	Frequent urination
8	Stomach ache		Cold feet

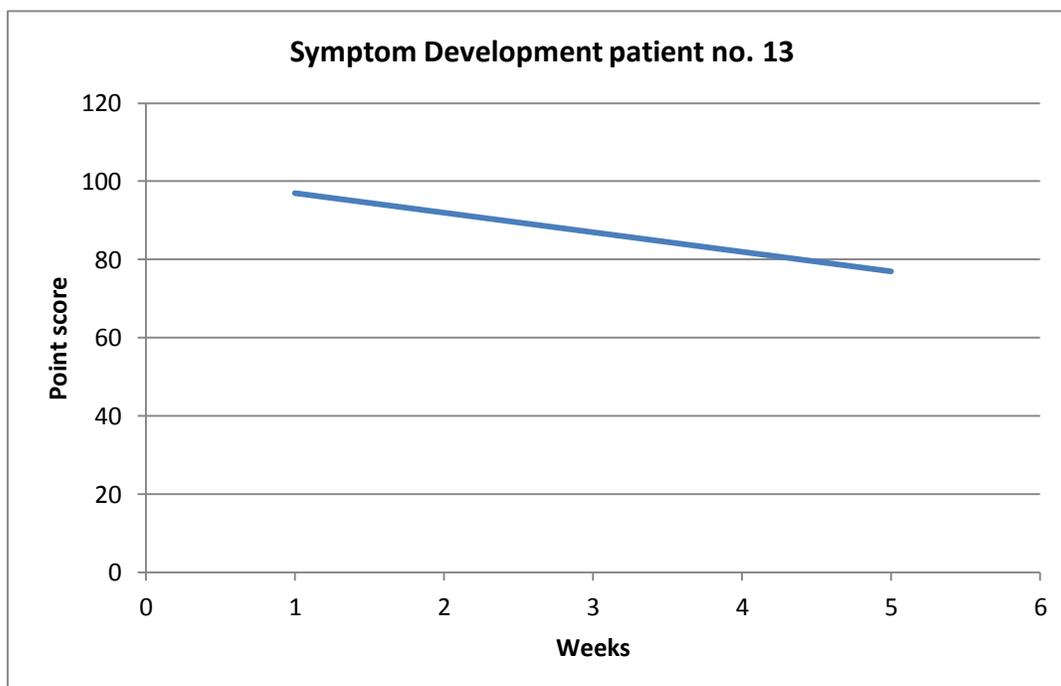

### Patient no. 13

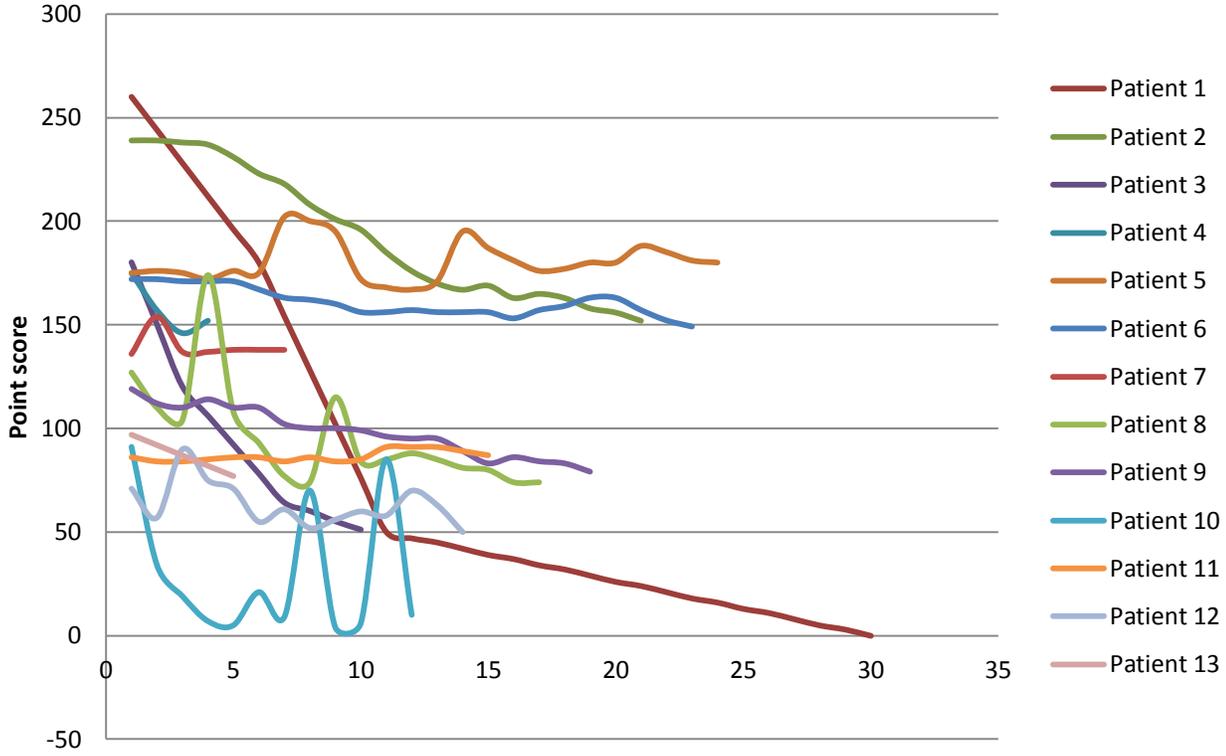

This 24 year old woman suffering from ME and this probably started in her 6 years of age with fatigue and exhaustion. This is exacerbated when she was 12 years old when symptoms become debilitating and she cannot go to school. Primary symptoms are extreme fatigue, sleep problems, poor concentration, nausea, memory problems, and difficulty keeping warm, high heart rate, weak muscles and musculoskeletal pain. She was examined and diagnosed by a Belgian professor in 2014, he also gives her special treatment. She relies on practical assistance in daily life.

Her max. score is 250 and the actual score is 98, before she starts intravenous Vitamin C February 13<sup>th</sup> 2015 she starts with 4 x 25 g and then 50 g per week. The patient also follow the treatment which the Belgian professor has prescribed. After 5 treatments, her actual score is 77.

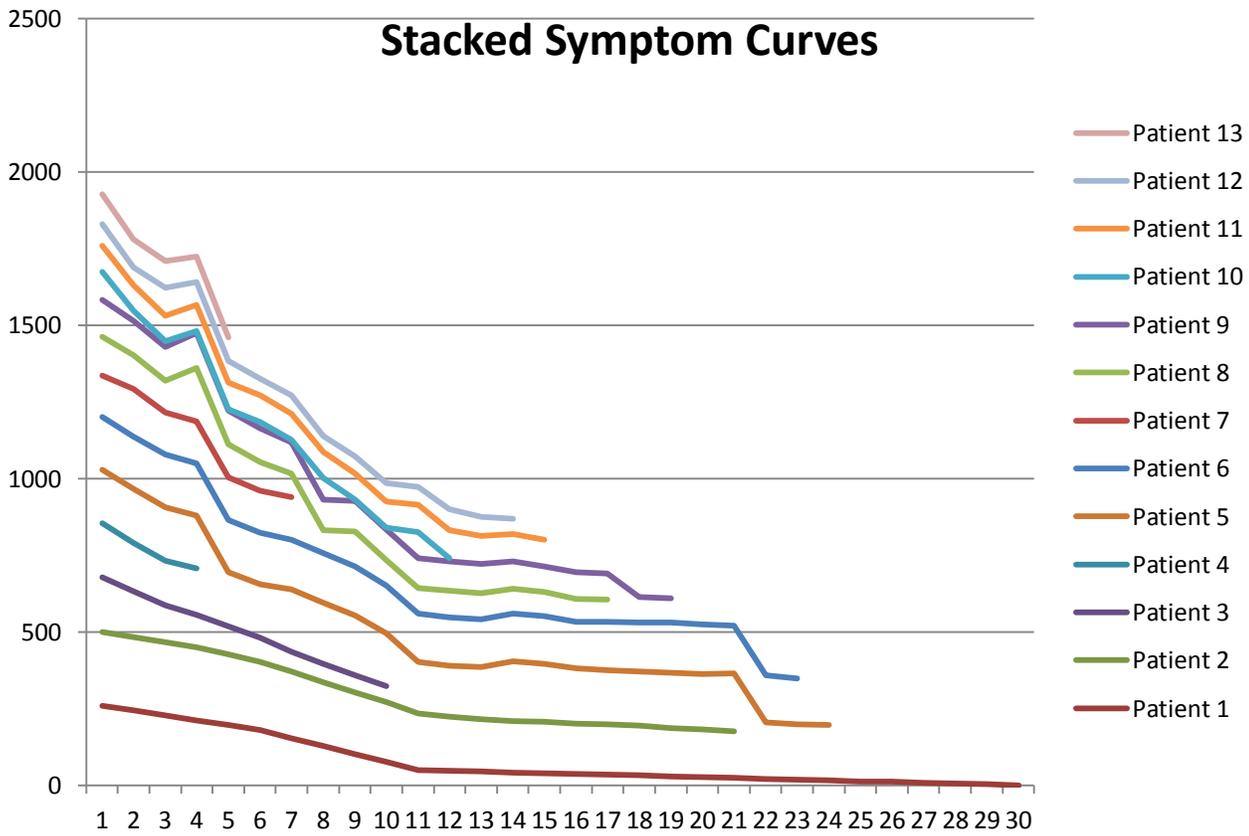

Symptoms			
1	Headache	14	Nausea
2	Sore entire body	15	Sensitivity
3	Mood swings	16	Visual disturbances
4	Fatigue	17	Sound sensitivity
5	Difficulty concentrating	18	Sensory disturbances
6	Insomnia	19	Heavy legs
7	Dizziness	20	Force reduction in arms
8	Sore eyes	21	Blemished Skin
9	Memory impairment	22	Pain right / left shoulder
10	Sore feet	23	Whistling in the ears "tinnitus"
11	Difficulty walking	24	Temperature fluctuations
12	Sore neck	25	Palpitations
13	Tingling in arms and legs	26	

## Common Symptom Development

## Stacked Symptom Curves

Below is a possible example of a symptom score card that patients have used to keep track of the extent of symptoms week by week.

<u>Week no.</u>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>
Vitamin C in gram	0	25	25	2x25	25	2x25
Glutathion in ml.			20			
EDTA						
<u>Symptoms</u>						
Loss of appetite	9	8	7	8	5	4
Pain in the body	10	7	6	5	4	3
Pain in the legs	10	6	8	6	5	4
Dizziness	8	5	5	4	3	2
Abnormal fatigue	7	6	6	5	5	4
Trembling and unsteadiness	9	8	7	4	4	3
Headache	10	8	6	6	5	3
Nausea	10	7	8	7	4	3
Difficulty concentrating	9	6	7	6	3	2
Increased thirst	8	6	3	4	2	1
<b>Total Score</b>	<b>90</b>	<b>67</b>	<b>63</b>	<b>55</b>	<b>40</b>	<b>29</b>
